

HOLVERT PEREZ

RESUME

ABOUT ME

Hello my name is Holvert, graduated from the information systems engineering career, passionate about learning new technologies.

with experience in the layout of websites through semantic HTML, creation of responsive websites. as well as adding interactivity between the user and said sites.

I have also learned relational databases through MySQL, where I did a school project which consisted of the creation of a CRUD using PHP as a server-side language with its Laravel 8 framework.

I am currently in the constant learning of frontend development using React JS, where I have created some small projects as a test. I have also dabbled a bit in the backend with Node JS where I created a small REST API with connection to MongoDB.
